

# 5-Minute Slipcase

The secret to the 5-Minute Slipcase is to not measure anything.

1. Begin with a piece of paper that is at least 3 times- but no more than 4 times - the width of the book. The height of the paper should be just under 2 times the width of the book PLUS 1 time the height.

2. To determine the center fold lines (the spine width), stand the book up along one width edge. Fold opposite side up to meet up with book. Repeat for other side. (2 Folds)

3. To set folds for book height, eyeball book to center of paper. Make a crease at head & tail, remove book and fold all the way across.

4. For diagonal folds, push side pieces in towards center & pivot spine folds over to meet the height folds. Repeat for all 4 sides.

5. Almost Done! Slip book into the case you've created, mark edge of book & fold to tuck inside. Repeat for side 2.
